

Air Conveyors

Engineering that moves . . .

Riley Automation's Air Conveyors are designed to transport components whilst retaining their orientation. The use of low pressure air - usually fan generated - allows the rapid but gentle transfer of components along infinite track lengths that can contain both bends and curves.

These conveyors are precision-manufactured from stainless steel to meet your specific requirements and provide an efficient and low cost solution to component transfer.

System Benefits:

- Smooth transfer
- Rapid transfer
- Significant distances
- Low running costs
- No moving parts, very reliable
- Can be designed with twists and turns.

A name you can trust

For over 50 years, Riley Automation has combined engineering excellence with innovative technology to deliver tailor-made solutions for materials handling.

Systems are manufactured using direct from CAD laser cutting, to ensure accuracy and cost effectiveness. Our solutions are fast, efficient and reliable and can be retro-fitted to just about any existing system you may have.
