

Elevators & Hopper Feeders

Engineering that moves...

Riley Automation offers a range of bulk storage and loading elevator systems to complement its range of vibratory and rotary feeders.

• Elevators

Our products are designed and manufactured to meet individual requirements and can be fitted to existing equipment or designed as complete, stand alone systems.

System Benefits:

- Standard range
- Built to order
- All stainless steel 304 and 316
- Painted mild steel frame 304 contact
- Products - components.

A name you can trust

Riley Automation's solutions are fast and efficient, that's why for over 50 years they have been keeping products on the move in manufacturing and process industries.

Certificate number 3944/03

Elevators & Hopper Feeders

• Hoppers

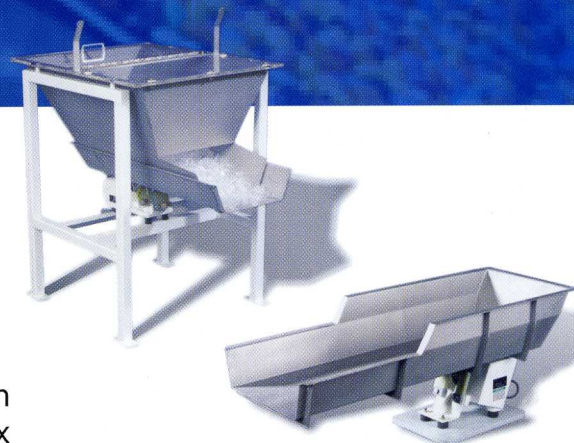

Simple systems include pedestal mounted hoppers with a variable speed hopper attached. More complex systems combine these items with an adjustable outlet gate and variable angle chute to allow relatively free flowing components to be discharged in a controlled movement. Where space is at a premium our elevating bulk hopper may be beneficial.

System Benefits:

- Complete hoppers with linear outfeed
- Vibratory hi-back troughs
- Vibratory troughs - skirt board hoppers
- Materials for construction - mild steel and stainless steel
- Powders - granules
- Individual components.

Keeping products on the move

Riley Automation combines engineering excellence with innovative technology to deliver tailor-made solutions for materials handling. Our units are laser cut direct from CAD which enables very accurate and repeatable manufacture.
